

# Combined automatic balancing valve ART. 6540

## Description

Art.6540 is a combined automatic balancing valve. It features three function in compact valve body:

1. Differential pressure controller
2. Control valve with linear characteristic
3. Flow limiter

### Benefits:

- Reliable heating system resulting in:
  - proper heat distribution even at partial loads
  - noise free operation based on stable low  $\Delta p$  over thermostatic radiator valves even in installation where higher pump head is needed
- Lower heating cost
- Better indoor temperature control
- Faster in simpler installation with less installation space needed

## Ordering

**Art.6540** valve (including 1.5 m impulse tube and imp. tube adapter)

| Picture | DN | Ext. thread (ISO 228/1) | Code No. |
|---------|----|-------------------------|----------|
|         | 15 | G ¾ A                   | 6510638  |
|         | 20 | G 1 A                   | 6510639  |
|         | 25 | G 1¼ A                  | 6510640  |

### Art.9566 Actuator

| Type                          | Power supply | Cable length | Code No. |
|-------------------------------|--------------|--------------|----------|
| Normally Closed <sup>1)</sup> | 230 V AC     | 1.2 m        | 4500574  |

<sup>1)</sup> up to 60 % of  $Q_{max}$  on Art. 6540 DN 25

## Technical data

| Nominal diameter                            |                       | DN  | 15  | 20    | 25     |
|---|-----------------------|---|---|-------|--------|

# Combined automatic balancing valve ART. 6540

## Mounting

Art.6540 should be mounted in flow in the direction of the arrow on the valve body. The impulse tube should be installed between Art 6540 and 3/8" adapter that is supplied together with the valve.

Alternatively, impulse tube can be connected to Art.6539 partner valve. With it, additional service functions such as flow verification, shut-off, etc are available.

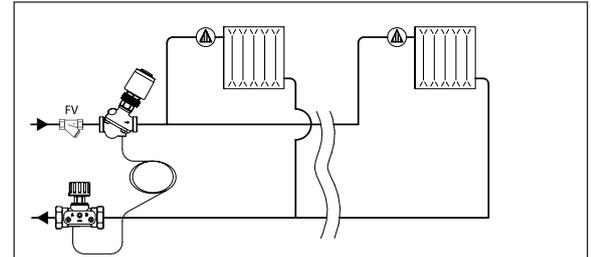

Fig. 1) The impulse tube must be flushed through before installation.

## Applications

Art. 6540 is designed to be used in heating residential application. It can be used both in radiator or floor heating systems. The valve offers 3 functions in one valve, and with its small valve body it is ideal for small spaces such as manifold cabinets etc.

Art.6540 is focused to systems with horizontal piping loops and individual flat connections: Art.6540 provides proper balance even at partial loads and limitation of maximal flow is simple and fast. In addition, programmable zone control (night setback or holiday mode) is available by using On/Off actuator, connected to a room controller <sup>1)</sup>.

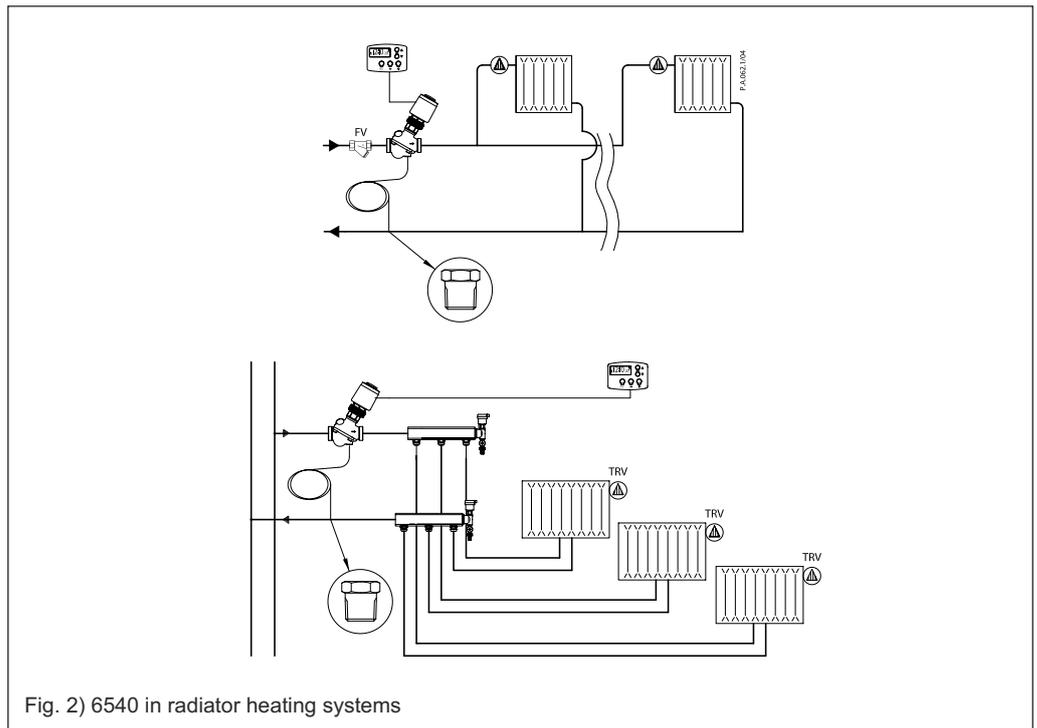

Fig. 2) 6540 in radiator heating systems

<sup>1)</sup> For each room only one control element (TRV or room controller) is to be used in order to ensure best indoor temperature control performance.

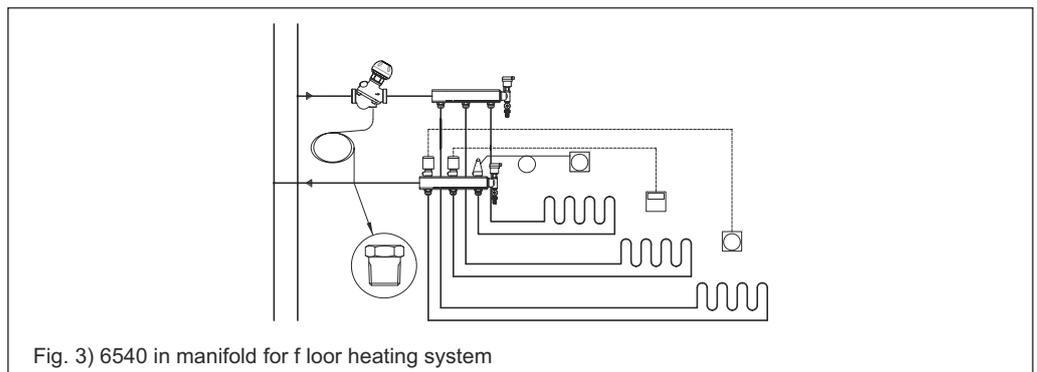

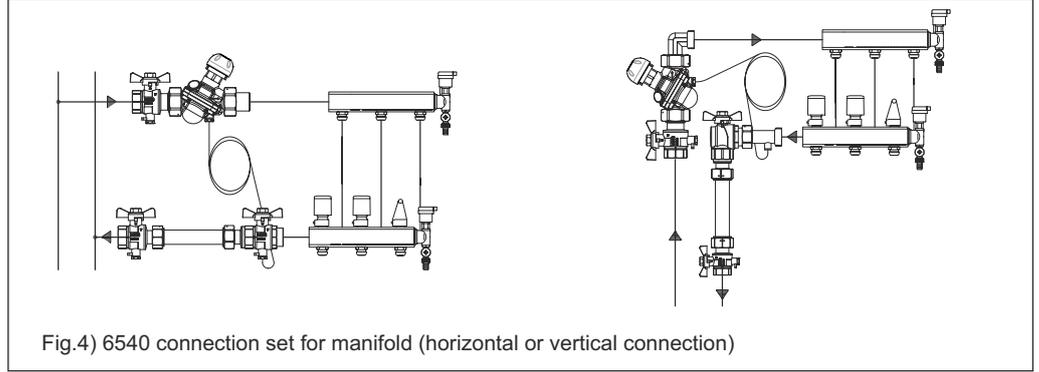

Fig. 3) 6540 in manifold for floor heating system

# Combined automatic balancing valve ART. 6540

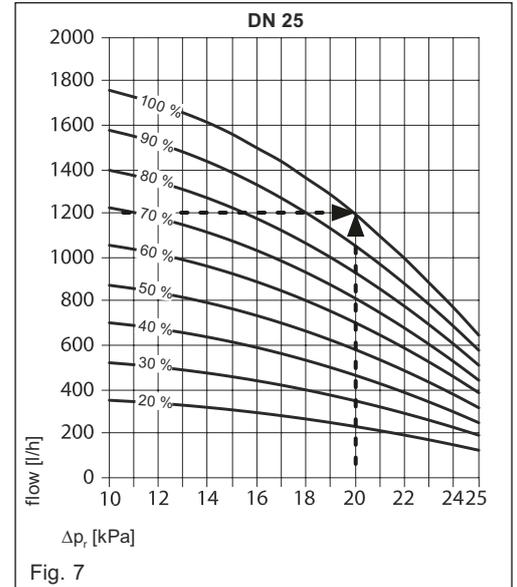

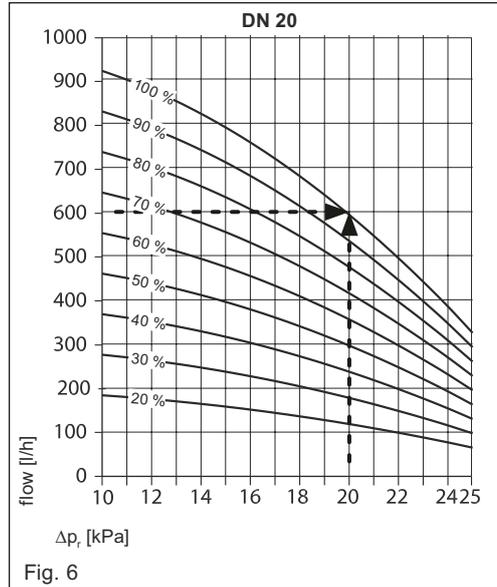

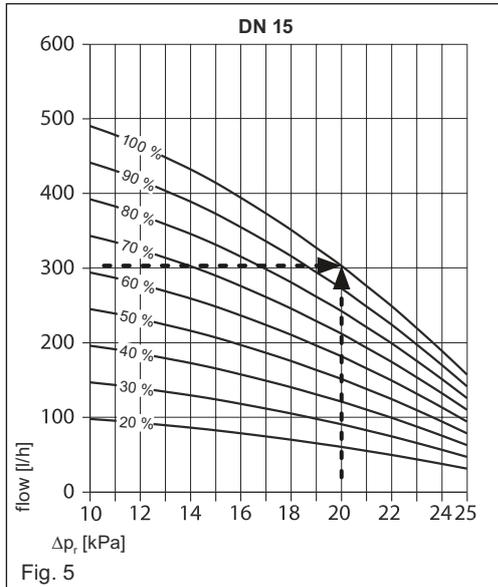

## Sizing

Art.6540 balancing valve is to be sized based on needed flow (Q) and needed differential pressure drop for the loop ( $\Delta p_r$ ). Max flow data are presented in table 1. For any other Q and  $\Delta p_r$  needed, Art. 6540 size and setting can be identified based on Fig. 5-7. Alternatively table 2-4 can be used for Art. 6540 sizing as well. Q is proportional to the setting on valve while upper limit differential pressure ( $\Delta p_r$ ) is kept the same.

Table 1

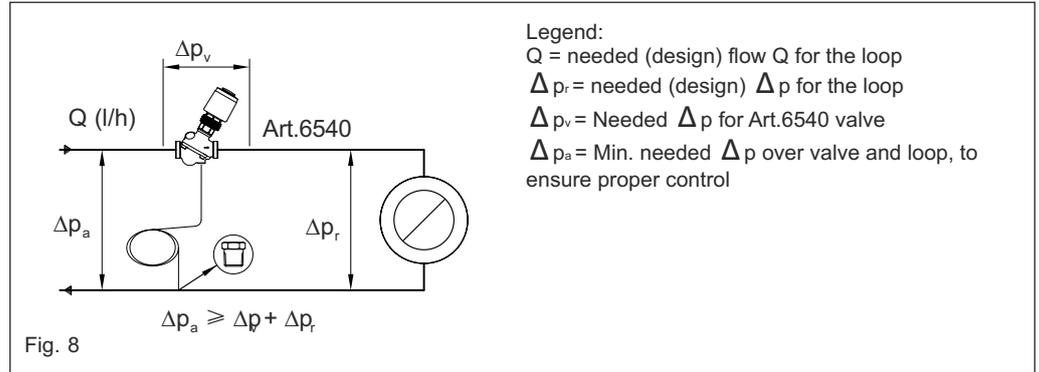

| Type at 100% setting                                   | DN  | 15  |     | 20  |     | 25   |      |
|--|-----|-----|-----|-----|-----|------|------|
| Q max.   | l/h | 300 | 490 | 600 | 915 | 1200 | 1800 |
| Maximum pressure drop available for system at max flow | kPa | 20  | 10  | 20  | 10  | 20   | 10   |
| Max. pressure at zero load                             |     | 35  |     | 35  |     | 35   |      |
| Min. differential pressure ( $\Delta p_d$ )            |     | 28  |     | 28  |     | 28   |      |
| Max. differential pressure ( $\Delta p_d$ )            |     | 400 |     | 400 |     | 400  |      |

# Combined automatic balancing valve ART. 6540

## Sizing (continuous)

### Example

Given:  
Design flow trough radiators loop: 420 l/h  
Pressure drop trough the loop at design flow: 20 kPa

Solution:  
Art.6540 DN 20 is selected. Set to 70 % (= 420/600), Art.6540 will control differential pressure of 20 kPa when design flow is achieved. It will at any loads including keep it under 35 kPa at zero load, while limiting the flow to radiator system to 420 l/h.

## Sizing (continuous)

## Design

1. Spindle
2. Stuffing box
3. Pointer
4. Control valve's cone
5. Membrane
6. Main spring
7. Hollow cone (pressure controller)
8. Vulcanized seat (pressure controller)
9. Impulse tube

Art. 6540 is a combined automatic balancing valve. It is working as  $\Delta p$  controller, flow limiter and zone controller. Higher pressure acts on the upper side of the control diaphragm (5) while via an impulse tube (9) lower pressure in the return pipe acts on the lower side of the diaphragm. When available pressure increases at partial loads, the membrane closes and thus keeps stable  $\Delta p$  inside the controlled loop.  $\Delta p$  controller keeps constant differential pressure on the controlled loop including the control part of Art. 6540.

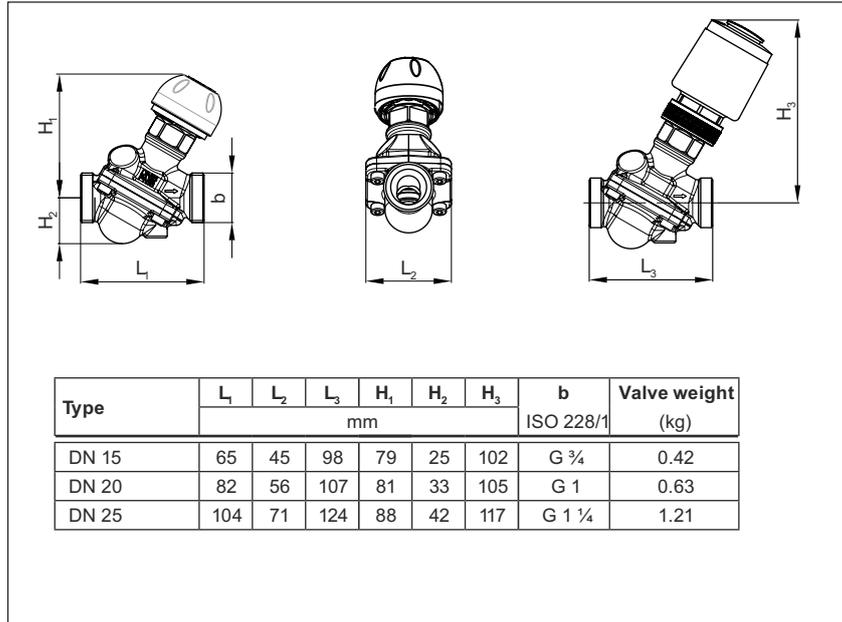

The control part of Art. 6540 is working as a flow limiter. This enables to set both the design flow as well as needed  $\Delta p$ . The flow rate is defined by presetting Art. 6540, based on pressure demand of the loop.

With actuator mounted on the valve, Art. 6540 can be used as zone valve. When connected to the room controller with time programs, functions such as night setback, holiday mode, etc become available.

### Art. 6540 - Combined Automatic Balancing Valve

Branch should be balanced with a differential pressure controller for dynamic hydronic balance, with following characteristics:

- a. Pressure class: PN 16
- b. Temperature range: -10 ... +120 °C.
- c. Connection size: DN15-DN25
- d. Connection type: External thread ISO 228/1
- e. Valve body material: DZR brass
- f. Installation: on flow pipe with connection via impulse tube to return pipe.
- g.  $\Delta p$  setting range: 10-25 kPa  
 Nom flow at 20 kPa: 300 l/h (DN15), 600 l/h (Dn20) and 1200 l/h (DN25)  
 Minimum  $\Delta p$  across valve and loop 28 kPa to ensure proper control  
 Max  $\Delta p$  at zero flow: 35 kPa  
 Max  $\Delta p$  across the valve: 4 bar
